MaxGXL™ is an all natural product that is **compositional U.S. patented**, has over 10 years of research & development behind it, and has been used clinically for 10 years.

MaxGXL™'s clinical test and laboratory results show that **100%** of the participants had a significant increase in intracellular glutathione after 8 weeks use.

For MaxGXL™: Start with 2 packs per day (each pack has 3 capsules), **one pack of MaxGXL™ in the morning and one pack mid-afternoon** before 4 pm. It's easier to take the capsules into your mouth, lubricate them with saliva before swallowing with plenty of water. You may also empty the three capsules into 4-6 oz. of water and drink down immediately or empty them into applesauce or yogurt, stir and eat right away. Some people increase to 3 packs per day to further increase stamina and endurance. (especially if you weigh over 220 pounds or so). Many take a pack 1 hour before bedtime for better sleep.

Your Results: Vary from person to person. Many notice results within a day or two, **50% generally notice results within a week, 75% generally notice results within 2 weeks and 90+% notice results within 3 weeks.**

For re-order use Max International ID # 130814 and call 1-801-316-6380.

MaxGXL™ FAQs

What is MaxGXL™?

MaxGXL™ is a complex nutritional supplement that uses an ideal combination of nutrients to facilitate glutathione replenishment. MaxGXL™ provides the nutrients necessary to enable every cell in your body to naturally produce more intracellular glutathione (GSH). GSH is a critical protein in every cell within the body.

What exactly is glutathione and why is it important?

Glutathione is a tri-peptide of the amino acids cysteine, glycine, and glutamic acid and is the master antioxidant of the body. Without glutathione, we die. The replenishment of the glutathione levels within the lymphocytes (also called white blood cells) increases the efficiency of the immune response. The increase in glutathione levels also results in the proliferation of lymphocytes that act as scavengers, and help to combat infections. It is truly the body's master antioxidant and its importance is critical to health and longevity.

What are possible results to look for when I increase glutathione levels?

Results typically improve with continued use, with most people report **even better results after 3 months.**

- * **Feeling generally "younger"** -- even 10 to 20 years biologically younger than your chronological age
- * **More "natural" energy** -- less likely to tire throughout the day
- * **Less joint and muscle aches and pains**
- * **Decreased pain** in general
- * **Mood improvement**
- * **Sharper state of mind**, mental clarity, and focus
- * **Younger looking skin** -- less dry skin, reduced appearance of some wrinkles, etc.
- * **Better sleep** -- more dreaming and remembering your dreams
- * **More stamina and endurance** -- less recovery time after working out
- * **Better memory** -- remembering names you normally would forget -- less "Senior moments"
- * **Reduced inflammation** or swelling
- * **Improved vision**
- * **Improved breathing** -- less asthma or allergy symptoms

With discontinued use a gradual decline in results for about 60 days, at which point you'll be back to feeling like you never took it.

Is MaxGXL™ different from other glutathione enhancing supplements? What makes MaxGXL™ effective?

MaxGXL™, is possibly the most sensible method of raising glutathione levels inside lymphocytes, or activated cells.

- 1) MaxGXL™ has a composition patent (composition patents are normally reserved for the most unique, and novel, ideas - usually pharmaceuticals) for a method of raising glutathione levels in humans.
- 2) MaxGXL™ is relatively inexpensive.
- 3) MaxGXL™ is taken in capsule form for your convenience.
- 4) We have had great success with MaxGXL™ and its ability to raise depleted glutathione levels. Not only will MaxGXL™ make your cells produce glutathione, it will also recycle existing stores of glutathione and maintain it in its most effective form.

What if I don't have enough glutathione - what happens? Why isn't oral glutathione well absorbed?

Decreased glutathione may be a result of various types of prolonged stress and hyperactivity of the immune system, which in turn compromises the health of the body's cells. Glutathione is broken down by acid in the stomach long before it ever reached the cells. Then at this point the molecule would still have to penetrate the cell wall which it cannot do. This is why you must feed your cells the precursors needed for them to naturally produce glutathione inside the cells.

Are there any side effects associated with MaxGXL™?

No. There are no known negative side effects associated with MaxGXL™. Initial "de-toxing" -- could include mild headaches, diarrhea-☹, constipation-☹, etc. Although most people don't experience any of these, if you do this is a sign of (1) the product is working, and (2) you need it worse than someone who does not noticeably de-tox. If you do noticeably de-tox, it should only last for 3-4 days. If your de-tox happens to be stronger than you want to endure, just cut back to 1-2 capsules 1-2 times a day and gradually increase it back up again. MaxGXL™ is 100% natural containing no sugar, starch, yeast, soy or preservatives. The product is manufactured and packaged in the USA in strict conformance with industry standards. Both its purity and potency is guaranteed.

What are the ingredients of MaxGXL™ and what do they do?

Calcium Ascorbate- A mineral salt of Vitamin C. Calcium Ascorbate is 80% Vitamin C and 20% calcium. Ascorbates are less acidic than other types of vitamin C and provide better absorption than ascorbic acid alone. It protects the body from toxins and acts as an immune builder and as an antioxidant. It is essential for growth and repair of tissues. It helps your body to cope with physical and mental stress. Calcium Ascorbate produces the frequency necessary to activate protease so is a key component to proper protein digestion as well. Also maximizes NAC absorption and helps protect existing glutathione stores.

L-Glutamine- The most abundant of all of the amino acids found in the muscles of the body. It has the ability to penetrate the so-called blood-brain barrier and is readily transformed into Glutamic Acid, which is essential for cerebral function. In other words, this amino acid is used as brain fuel. L-glutamine is an essential dietary component which nourishes cells in the gastro-intestinal lining, liver and immune system. It also preserves liver glutathione after hepatic injury.

Milk Thistle- Contains some of the most potent liver protecting substances known. One of the active phytochemicals called Silymarin prevents free radical damage in the liver and kidneys. It also stimulates new liver cells and is an excellent immune system builder.

N acetyl Cysteine (NAC) - N-acetyl cysteine (NAC) is the best dietary source of glutathione. It is a main precursor for the manufacture of glutathione (GSH).

N-acetyl d-glucosamine- N-acetyl-d-glucosamine (NAG) is a key precursor in the biosynthesis of mucosal glycoproteins. It protects the underlying tissues from enzymes, acids and bacteria while providing a surface to absorb nutrients.

Alpha Lipoic Acid (ALA)- Alpha lipoic acid increases the body's ability to use cysteine to manufacture glutathione. It also enables the key enzyme required for glutathione synthesis to work at optimal conditions, and induces an increase in intracellular GSH.

Quercetin- Quercetin plays a critical role in regenerating glutathione and helps to eliminate toxic compounds found in the liver.

Cordyceps- Cordyceps functions as an antioxidant and anti-inflammatory agent. It has also been shown to increase liver energy and glutathione synthesis. In MaxGXL, however, its primary function is to reduce inflammation and free radicals by decreasing the thermostat for inflammation called nuclear factor kappa beta.

How can I get more MaxGxL™ and Max N-Fuze™?

By **contacting 1-801-316-6380** or by visiting www.maxgxl.com where you can log-in and purchase MaxGXL™ and /or MaxWLX™ and/or Max N-Fuze™. **In either case, you can reach Dr. Mines for answers to any questions at 202-587-2792.**

One final note -- MaxGXL™ is not intended to diagnose, treat, cure, or prevent any disease. It simply gives your cells the nutrients they need to produce more glutathione, which in turn helps every cell function better. There are no known conflicts with MaxGXL™ and prescription medications. However, if you have any medical or health issues, consult with your personal physician prior to using MaxGXL™. MaxGXL™ is for adult use only. It is not for use by young children, pregnant women or nursing mothers.
